#### Abstract

Undirected binary fuzzy graphs can be obtained from two given undirected binary fuzzy graphs using the operations, cartesian product, composition, tensor and normal products. In this broadsheet, we find the degree of a pinnacle in undirected binary fuzzy graphs formed by these operations in terms of the degree of vertices in the given undirected binary fuzzy diagrams in some particular cases.

## Keywords-

Cartesian product, Composition, Degree of a vertex, Tensor product, Normal product.

## INTRODUCTION

Fuzzy graphs introduced by Rosenfeld in 1975[1-2, 9, 10]. The operations of union, join, cartesian product and composition on two fuzzy graphs were defined by Mordeson. J. N. and Peng. C.S [3-8]. In this paper, we study about the degree of a vertex in undirected binary fuzzy graphs which are obtained from two given undirected binary fuzzy graphs using the operations cartesian product and composition of two undirected binary fuzzy graphs, tensor and normal product of undirected binary fuzzy graphs. In general, the degree of vertices in cartesian product and composition of two undirected binary fuzzy graphs, tensor and normal product of two undirected binary fuzzy graphs $B G_{1}$ and $B G_{2}$ cannot be expressed in terms of those in $B G_{1}$ and $B G_{2}$. In this paper, we find the degree of vertices in cartesian product, composition, tensor and normal product of $B G_{1}$ and $B G_{2}$ in some particular cases.

## PRELIMINARIES

## Definition 2.1:

A fuzzy subset $\mu$ on a set X is a map $\mu: \mathrm{X} \rightarrow[0,1]$. A map $\beta: X \times X \rightarrow[0,1]$ is fuzzy relation on X if $ß(\alpha, \beta) \leq \mu(x) \Lambda \mu(y)$ for all $\alpha, \beta \in \mathrm{X}$. $ß$ is a symmetric fuzzy relation if $ß(\alpha, \beta)=ß(\beta, \alpha)$ for all $\alpha, \beta \in \mathrm{X}$.
Definition 2.2:
Let $X$ be a non-empty regular set. A binary fuzzy set $B$ in $X$ is an objective having the practice $B=$ $\left\{\left(\alpha, \mu^{\rho}(\alpha), \mu^{h}(\alpha)\right) / \alpha \in X\right\}$ where $\mu^{\rho}: X \rightarrow[0,1]$ and $\mu^{h}: X \rightarrow[0,1]$ are mappings.

## Definition 2.3.

A binary fuzzy graph of $B G^{*}=(V, E)$ is a pair $B G(A, B)$ where $A=\left(\mu_{A}^{\rho}, \mu_{A}^{n}\right)$ is a binary fuzzy set in $V$ and $B=\left(\mu_{B}^{\rho}, \mu_{B}^{h}\right)$ is a binary fuzzy set in VXV such that $\left(\mu_{B}^{\rho}(\alpha \beta) \leq \mu_{A}^{\rho}(\alpha) \Lambda \mu_{A}^{\rho}(\beta)\right.$ for all $\alpha, \beta \in V X V,\left(\mu_{B}^{h}(\alpha \beta) \geq\right.$ $\mu_{A}^{h}(\alpha) V \mu_{A}^{h}(\beta)$ for all $\alpha, \beta \in V X V$, and $\left(\mu_{B}^{h}(\alpha \beta)=\left(\mu_{B}^{\rho}(\alpha \beta)=0\right.\right.$ for all $\alpha, \beta \in V X V-E$.

## Degree of a vertex in the cartesian product

In above defination, for any vertex $\left(\alpha_{1}, \beta_{1}\right) \in V$

$$
\begin{aligned}
& \quad d_{B G_{1} X B G_{2}}\left(\alpha_{1}, \alpha_{2}\right)=\sum_{\left(\alpha_{1}, \alpha_{2}\right)\left(\alpha_{1}, \beta_{2}\right) \in E}\left[\left(\mu_{A_{1}}^{\rho} X \mu_{\boldsymbol{A}_{2}}^{\rho}\right)\left(\alpha_{1}, \alpha_{2}\right)\left(\beta_{1}, \beta_{2}\right),\left(\mu_{A_{1}}^{n}, \mu_{A_{2}}^{n}\right)\left(\alpha_{1}, \alpha_{2}\right)\left(\beta_{1}, \beta_{2}\right)\right] \\
& =\sum_{\left(\alpha_{1}=\beta_{1}\right)\left(\alpha_{2}, \beta_{2}\right) \in E_{2}}\left[\left(\mu_{\boldsymbol{A}_{1}}^{\rho}\left(\alpha_{1}\right) \Lambda \mu_{\boldsymbol{B}_{2}}^{\rho}\right)\left(\alpha_{2}, \beta_{2}\right),\left(\mu_{A_{1}}^{n}\left(\alpha_{1}\right) V \mu_{B_{2}}^{n}\left(\alpha_{2}, \beta_{2}\right)\right]+\right. \\
& \sum_{\left(\alpha_{2}=\beta_{2}\right)\left(\alpha_{1}, \beta_{1}\right) \in E_{1}}\left[\left(\mu_{B_{1}}^{\rho}\left(\alpha_{1}, \beta_{1}\right) \Lambda \mu_{\boldsymbol{A}_{2}}^{\rho}\right)\left(\beta_{2}\right),\left(\mu_{B_{1}}^{n}\left(\alpha_{1}, \beta_{1}\right) V \mu_{\boldsymbol{A}_{2}}^{n}\left(\beta_{2}\right)\right)\right]
\end{aligned}
$$

In the following theorems, we define the degree of $\left(\alpha_{1}, \alpha_{2}\right)$ in $B G_{1} X B G_{2}$ in terms of those in some particular cases.
Theorem 1: Let $B G_{1}$ and $B G_{2}$ be two undircted binary fuzzy graphs. If $\mu_{\boldsymbol{A}_{\mathbf{1}}}^{\rho} \geq \mu_{\boldsymbol{B}_{\boldsymbol{B}^{\prime}}}^{\rho}, \mu_{\boldsymbol{A}_{\mathbf{1}}}^{n} \leq \mu_{\boldsymbol{B}_{2}}^{n}$ and $\mu_{\boldsymbol{A}_{\mathbf{2}}}^{\rho} \geq \mu_{\boldsymbol{B}_{\boldsymbol{B}^{\prime}}}^{\rho}, \mu_{\boldsymbol{A}_{\mathbf{2}}}^{n} \leq$ $\mu_{B_{1}}^{n}$ then $d_{B G_{1} X B G_{2}}\left(\alpha_{1}, \alpha_{2}\right)=d_{B G_{1}}+d_{B G_{2}}$
Proof: By deffination of degree of a vertex in cartesian product

$$
\begin{aligned}
d_{B G_{1} X B G_{2}}\left(\alpha_{1}, \alpha_{2}\right)= & \sum_{\left(\alpha_{1}=\beta_{1}\right)\left(\alpha_{2}, \beta_{2}\right) \in E_{2}}\left[\left(\mu_{\boldsymbol{A}_{1}}^{\rho}\left(\alpha_{1}\right) \Lambda \mu_{\boldsymbol{B}_{2}}^{\rho}\left(\alpha_{2}, \beta_{2}\right),\left(\mu_{\boldsymbol{A}_{1}}^{n}\left(\alpha_{1}\right) V \mu_{\boldsymbol{B}_{2}}^{n}\left(\alpha_{2}, \beta_{2}\right)\right]+\right.\right. \\
& \sum_{\left(\alpha_{2}=\beta_{2}\right)\left(\alpha_{1}, \beta_{1}\right) \in E_{1}}^{n}\left[\mu_{\boldsymbol{B}_{1}}^{\rho}\left(\alpha_{1}, \beta_{1}\right) \Lambda \mu_{\boldsymbol{A}_{2}}^{\rho}\left(\beta_{2}\right),\left(\mu_{\boldsymbol{B}_{\mathbf{1}}}\left(\alpha_{1}, \beta_{1}\right) V \mu_{A_{\mathbf{2}}}^{n}\left(\beta_{2}\right)\right]\right. \\
= & \sum_{\left(\alpha_{2}, \beta_{2}\right) \in E_{2}}\left[\left(\mu_{\boldsymbol{B}_{\mathbf{2}}}^{\rho}\left(\alpha_{2}, \beta_{2}\right), \mu_{\boldsymbol{B}_{\mathbf{2}}}^{n}\left(\alpha_{2}, \beta_{2}\right)\right]+\sum_{\left(\alpha_{1}, \beta_{1}\right) \in E_{1}}\left[\left(\mu_{\boldsymbol{B}_{\mathbf{1}}}^{\rho}\left(\alpha_{1}, \beta_{1}\right),\left(\mu_{\boldsymbol{B}_{1}}^{n}\left(\alpha_{1}, \beta_{1}\right)\right]\right.\right.\right. \\
= & d_{B G_{2}}\left(\alpha_{2}\right)+d_{B G_{1}}\left(\alpha_{1}\right)
\end{aligned}
$$

## Example 1

## CONCLUSION

In this paper, we have found the degrees of vertices in $B G_{1} * B G_{2}, B G_{1} X B G_{2}, B G_{1}{ }^{\circ} B G_{2}, B G_{1} \otimes B G_{2}$ in terms of degree of vertices in and under some conditions and illustrated them through examples. This will be helpful when the graphs are very large. Also they will be very useful in studying various properties of cartesian product, composition, tensor product, normal product of two bipolar fuzzy graphs.
