Abstract

In recent times, female infertility is a rapidly growing problem. Not every couple has the goal to become the parents, but for those who wish to do, being unable to conceive is a painful thing. Most of the time this dream comes true naturally, but in few cases medical intervention is necessary. Ayurveda is the ancient system of medicine, which gives importance to both the aspect of the treatment equally i.e. preventive and curative aspect. Rasayana Chikitsa plays a key role in the treatment of all the diseases in both preventive and curative.

Key words

Female fertility, Ayurveda, Vandhyatva, Rasayana chikitsa

Introduction

Infertility has become a major health issue and social problem in the current scenario faced by a huge population across the globe.

WHO estimates that female infertility in India has increased from 3.9 % to 16.8 %. Female infertility has been defines as failure to conceive after frequent unprotected sexual intercourse for one or two years in couple who are in their reproductive age group. Ayurveda is the Ancient system of medicine, which has got unique line of treatment for female infertility.

According to Ayurveda, conception takes place from healthy sperm, a healthy ovum and a healthy uterus. Sometimes there is no reason and no cause was detected for the infertility and patient fails to get get pregnant.

Over few past times, fertility treatment has expanded in other field of medicines also. Hormonal therapy, In vitro Fertilization i.e. IVF, Embryo Transfer i.e. ET, Gamete IntraFallopian Transfer i.e. GIFT etc are developed, are very expensive but they give unsatisfactory results along with lots of side effects like ovarian hyperstimulation, frequent abortion and major possibility of long term ovarian cancer.

The whole world see toward us with sight of hope where, research works on endometrial factors was negligible in Ayurveda research field. Thus, the need of the hour today is in finding means to improve the implantation.

Therefore a preliminary effort has been made to provide simple and effective management of decreased endometrial receptivity which can be practiced regularly for achieving and preserving conception by increase implantation rates1.

Materials and Methods –

A detailed review of concept of infertility along with the Rasayana indicated in its management. Context will be compiled from available classical literature as well as research papers, journals and monographs.
Observations –

Vandhyatva is not a disease, but is a manifestation or revelation of an underlying disease or disorder. Moreover in Ayurveda the definition of vandhyatva is not restricted to inability to conceive but not begetting a live progeny².

In Ayurveda six types of vandhyatva has been mentioned in Harita Samhita among them one is Balaksaya Vandhyatva explaines. Ashwagandha, Guduchi, Shatavari, Bala, Lashuna etc. are widely accepted as they are Vatahara are some of the rasayana effective in vandhyatva. Rasayana therapy helps in maintaining health, prevention of diseases and also gives power to the body to avoid the recurrence of diseases.

In our sastras lot of importance is given to progeny as they are source of love, strength, happiness, excellence, spread of family tree, vastness, fame, utility, satisfaction, pleasure etc³.

Global prevalence of infertility –

One in every 4 couples in developing countries, which is found to be affecting by infertility. When an evaluation of responses from women in Demographic and Health Surveys from 1990 was completed in collaboration with WHO in 2004. This burden remains high in society. According to WHO study, which was published at the end of 2012, has shown that overall burden of infertility in women from 190 countries has remain similar in estimated levels and trending from 1990 to 2010⁴.

Causes of Infertility –

Conception depends on the fertility potential of both partner. Male is directly responsible in about 30-40%, female in about 40-55% and both are responsible in about 10% cases. The remaining 10% is unexplained⁵.

Causes of female infertility:

- Hormonal imbalance
- Ovarian functional problem
- Hyperprolactinemia
- Tubal factors
- Uterine factors
- Thyroid disease
- Sexually transmitted disease
- Structural obstruction

Rasayana Chikitsa –

According to Sharangadhara, rasayana is defined as, which ameliorates Jara (Senility) and Vyadhi (underlying disease)⁶.

- After Shodhana, rasayana chikitsa is beneficial.
- Its main aim is the proper nourishment of saptadhatus
- It is beneficial not only in enhancing the longevity, intellect, physical and mental strength, along with the reproductive well being. It also alleviates the disease⁷.
- Among various rasayanas available, Naimitikara Rasayana, Achararasayana and Ajasrikarasayana holds good for the management of female infertility.

Acharya Charaka explaines about Prajasthapana Dravya. He also explains factors responsible for conception and maintenance of healthy pregnancy⁸:

- Ritu
- Kshetra
- Ambu
- Beeja
Role of Rasayana in Reproductive age –

- To enhance the quality of Garbha Sambhava Saamgr
d- To care for pre-existing diseases
- Barkers hypothesis
- Prevention of Garbha and Garbhini Vyapad

Role of rasayana in Reproductive age (Garbhn/Soothika Rasayana) –

- To fulfill the deficiencies
- To ensure optimum maternal nutrition
- To provide adequate supplements to fetus
- To care for fetal growth and development
- To treat Garbha Vyapad, if any
- To care for sootika

Rasayana due to its anti-anaemic properties and nutritional values, it has been used as a Naimittika rasayana (promoter of specific vitality in specific disease) by some of the Ayurvedic physician to women during her pregnancy expecting a good health of both mother and her offspring.

Role of rasayana in infertility –

- To enhance endometrial receptivity
- To modify the inflammatory markers in Endometriosis & fibroid
- To have reform genetic factors
- To improve ART outcome

Rasayana Yogas10-16 –

According to some of the Case study –

- **Phalasarpi**\(^7\) is added for proper rejuvenation of the endometrium. It is a uterine tonic. It acts on the endometrium and helps to stabilize the growth of it, if it is a poor endometrium then it rejuvenates the cells and if it is an excess growth then it reduces the cells thus helping to normalize the growth and controlling the hormones involved.

- **Sahachara Taila** is also best shaman dravya for Vata. **Shatapushpa kalka** is best drug Dravya for Vandhyatva i.e infertility\(^18\).

- In this case report, patient suffered from primary infertility since 6 years, she was treated with Chiruvilwadi kashayam, Dhanwantharam gulika, Jeerakarishtam, Kumaryasavam and Manasamithra vatakam for 1 month. Took follicular study on next cycle and revealed post ovulatory status on 16\(^{th}\) day of cycle. Advised **Phalasarpis**, Dhanwantharam gulika and Manasamithra vatakam for 2 weeks. Patient came with positive urine pregnancy test after 1 week of missed periods\(^19\).

**Discussion** –

Shodhana followed by rasayana chikitsa helps in the regulation of menstruation, also stimulates ovulation, hyperandrogenism and obesity associated with infertility.

The mentioned rasayanas are multi potential and are beneficial in treating menstruation related problems which leads to infertility.

**Conclusion** –

- Rasayana chikitsa plays a major role in the preventive measures in the case of infertility, which is one of the important challenging aspect in the medical practice.
- Basic education followed by proper lifestyle benefitting in treating the symptoms of infertility is a major challenge
- Rasayana with the combined effect of Shodhana helps in regulating menstrual irregularities and obesity associated with infertility
- Hence rasayana with Shodhana provides excellent result to the infertility patient for long term solution.
